

Abdalmegeed Alfiky

SOC Analyst | Cybersecurity Engineer | Product Owner

abdalmegedalfiky@gmail.com | +20 1080219946 | linkedin.com/in/abdalmeged-alfiky | github.com/abdalmegedalfiky-ops | abdalmegedalfiky-ops.github.io

▣ PROFILE SUMMARY

Results-driven cybersecurity professional and product technologist with a strong foundation in network security, SOC operations, and system administration. Currently serving as Product Owner at Dash (Riyadh, KSA), driving product strategy for a last-mile delivery platform, while advancing as an Information Security Analyst through the Digital Egypt Pioneers Initiative (DEPI). Brings 2+ years of hands-on experience securing military-grade networks and a proven track record in SIEM deployment, threat detection, vulnerability management, and incident response. Uniquely positioned at the intersection of cybersecurity engineering and product ownership — capable of translating complex technical requirements into actionable product decisions that align security posture with business objectives.

▣ EDUCATION

Bachelor's Degree in Computer Science — Faculty of Computers and Information, Tanta University	09/2019 – 06/2023
Information Security Analyst Track — Digital Egypt Pioneers Initiative (DEPI)	11/2025 – Present
- Built strong foundation in data protection, encryption, and enterprise security architecture - Gained hands-on experience in SOC operations, SIEM monitoring, and log analysis - Performed threat analysis using IoCs and Attack Kill Chain methodology - Conducted vulnerability assessments and risk prioritization - Applied full Incident Response lifecycle (Detection → Containment → Eradication → Recovery) - Completed a SOC simulation project covering monitoring, investigation, response, and decision-making	
CCNA Acceleration Scholarship — National Telecommunication Institute (NTI)	02/2023
Network Fundamentals, Switching, IP Connectivity, Security, Automation	

▣ PROFESSIONAL EXPERIENCE

Dash · Riyadh, Saudi Arabia (Remote) — Product Owner	06/2026 – Present
- Own and prioritize the product backlog, aligning features with business goals and user needs across a fast-paced logistics platform - Lead stakeholder discovery sessions to gather, refine, and translate requirements into clear user stories and acceptance criteria - Partner with the engineering team to deliver product increments on schedule within Agile/Scrum framework - Communicate product vision, OKRs, and sprint outcomes to senior leadership and C-level stakeholders - Drive market research and competitive analysis to continuously evolve the product roadmap	
Egyptian Army — Signal Corps Officer	10/2023 – 10/2025
- Monitored and maintained secure network operations for mission-critical systems, ensuring 99%+ availability and integrity - Investigated and resolved network incidents including connectivity anomalies, access violations, and system failures - Managed user accounts and access control (IAM) across enterprise infrastructure, enforcing least-privilege principles - Supported incident handling lifecycle by identifying anomalous system behaviors and leading structured resolution workflows - Performed advanced network diagnostics and troubleshooting to maintain operational continuity under high-pressure conditions	

▣ TECHNICAL SKILLS

Security Operations (SOC): | SIEM Monitoring & Log Analysis | Incident Detection & Response | Phishing Analysis | Microsoft Defender | Threat Intelligence & IoCs | Kill Chain Analysis | Alert Tuning

Security Tools: | ELK Stack (Elasticsearch, Kibana, Logstash) | Nessus | Metasploit | Nmap | Splunk | TryHackMe (SOC Path)

Networking: | TCP/IP | Routing & Switching (CCNA) | DNS, DHCP | Network Traffic Analysis | Structured Cabling

System Administration: | Windows Server & Active Directory | IAM | OS Hardening | Patch Management | Linux (Red Hat) | OpenShift

Programming & Automation: | Python | Bash | SQL | C++ | Ansible

Product & Agile: | Product Ownership | Backlog Prioritization | Stakeholder Management | Scrum | Roadmap Planning

▣ PROJECTS

ELK Stack SIEM Implementation — github.com/abdalmegedalfiky-ops/SOC-SIEM-ELK-Windows-Monitoring

- Deployed full ELK Stack (Elasticsearch, Logstash, Kibana, Filebeat, Elastic Agent) for centralized log monitoring
- Ingested and parsed logs from Windows endpoints, servers, and network devices
- Built real-time Kibana dashboards and mapped detections to MITRE ATT&CK (T1110, T1078, T1068, T1136, T1531)
- Created correlation rules to identify brute-force, privilege escalation, and unauthorized access patterns

Vulnerability Assessment & Remediation — Metasploitable 2

- Conducted full vulnerability scanning using Nessus and Nmap on Metasploitable 2 (Kali Linux lab)
- Identified and classified 11 critical CVEs including misconfigurations, outdated services, weak authentication
- Executed structured remediation: closed vulnerable ports, patched services, hardened authentication
- Verified fixes via post-remediation Nessus scan; documented complete lifecycle (Scan → Analyze → Remediate → Verify)

SIEM-Based Log Analysis & Alerting System

- Designed simulated SIEM for centralized log collection with multi-source correlation
- Built alerting rules targeting brute-force and unauthorized access; simulated full SOC escalation workflow
